Lab 1 CNN

Model card

João Valério

Eirik Grytøyr

Date: 13/04/2023

1. MODEL DETAILS

a. Person or Organization

The responsible individuals of the present project are:

- João Valério (joao.agostinho@estudiantat.upc.edu)
- Eirik Grytøyr (grytoyr.grytoyr@estudiantat.upc.edu)

From the FIB - UPC Universitat Politècnica de Catalunya organization.

b. Date

13.04.2023

c. Version

236 221 parameters

d. Type

Convolutional neural network (CNN).

2. INTENDED USE

The primary purpose of this model is for educational use within the context of a deep learning assignment in the Master in Artificial Intelligence program at UPC. The model was designed to demonstrate the understanding and application of Convolutional Neural Networks (CNNs) and deep learning concepts in the domain of image classification.

This model can serve as a baseline for comparing the performance of different algorithms or more complex models on the same problem, assisting in identifying areas for improvement and potential routes for further research.

Please note that this model is not intended for deployment in real-world applications or for use in critical applications. The model's performance and generalizability have not been rigorously tested, and it may not be suitable for use outside of the educational context.

3. METRICS

During development, the primary metric used was validation accuracy, accompanied by the true positive distribution from the confusion matrix. For the final evaluation of the model, metrics such as accuracy, precision, recall, and F1-score were used and are presented in Chapter 6.

4. THE DATA

The training data used is the low-resolution images from the Museum Art Medium dataset (https://storage.hpai.bsc.es/mame-dataset/MAMe_data_256.zip), which contains 29 classes of materials and techniques. Each class has an equal distribution of 700 examples in the dataset and 150 examples in the validation set.

Additionally, the labels Woven fabric, Glass, and Lithograph have been oversampled by factors of 0.2, 0.3, and 0.2, respectively. This was achieved through data augmentation involving 0-10-degree rotation, 0-0.2 height and shift range, and 0-0.2 zoom.

The test data used follow the distribution in Table 1:

Table 1: Label distribution in the test set.

| Label | Distribution | Label | Distribution |
|------------------------|--------------|-----------------------|--------------|
| Albumen photograph | 700 | Lithograph | 700 |
| Bronze | 700 | Marble | 257 |
| Ceramic | 700 | Oil on canvas | 700 |
| Clay | 313 | Pen and brown ink | 286 |
| Engraving | 700 | Polychromed wood | 375 |
| Etching | 700 | Porcelain | 700 |
| Faience | 700 | Silk and metal thread | 95 |
| Glass | 700 | Silver | 700 |
| Gold | 700 | Steel | 133 |
| Graphite | 188 | Wood | 700 |
| Hand-colored engraving | 328 | Wood engraving | 361 |
| Hand-colored etching | 584 | Woodblock | 700 |
| Iron | 265 | Woodcut | 700 |
| Ivory | 572 | Woven fabric | 700 |
| Limestone | 700 | - | - |

The distribution indicates that the generalizability for labels with low representation such as Faience and Graphite has low confidence.

a. Preprocessing

The data is globally normalized.

b. Limitations

Upon inspecting the dataset, it is observed that objects are centred in the images, unrotated, and presented with good lighting conditions. Consequently, any new, unseen data should adhere to the same conditions for optimal performance. The developers have not conducted an analysis to determine whether the objects accurately represent the art labels, in form of style or techniques. The model supports input images of resolution 256x256.

The tests are performed on predefined validation and test sets. Those might have different characteristics than the training set. Additionally, it is not performed K-fold cross-validation or statistical analysis of the results, so it might be affected by the initialization.

5. MODEL ARCHITECTURE

Following is the representation of layers with output shape and parameters:

| Layer (type) | Output Shape | Param # |
|--------------------------------|----------------------|---------|
| ===== | | |
| conv2d (Conv2D) | (None, 256, 256, 16) | 448 |
| max_pooling2d(MaxPooling2D) | (None, 128, 128, 16) | 0 |
| conv2d_1 (Conv2D) | (None, 128, 128, 32) | 4640 |
| max_pooling2d_1 (MaxPooling2D) | (None, 64, 64, 32) | 0 |
| dropout (Dropout) | (None, 64, 64, 32) | 0 |
| conv2d_2 (Conv2D) | (None, 22, 22, 64) | 18496 |
| max_pooling2d_2 (MaxPooling2D) | (None, 11, 11, 64) | 0 |
| dropout_1 (Dropout) | (None, 11, 11, 64) | 0 |
| conv2d_3 (Conv2D) | (None, 4, 4, 128) | 73856 |
| max_pooling2d_3 (MaxPooling2D) | (None, 2, 2, 128) | 0 |
| dropout_2 (Dropout) | (None, 2, 2, 128) | 0 |
| flatten (Flatten) | (None, 512) | 0 |
| dense (Dense) | (None, 256) | 131328 |
| dense_1 (Dense) | (None, 29) | 7453 |
| ===== | | |
| Total params: 236,221 | | |
| Trainable params: 236,221 | | |
| Non-trainable params: 0 | | |

6. PERFORMANCE

Table 2 shows the results after applying the model to the test data set.

The overall accuracy is 0.694, while the macro F1 score is 0.679.

Table 2: Test results

| Label | Precision | Recall | F1-Score | Support |
|-------------------------|-----------|--------|----------|---------|
| Albumen photograph | 0.95 | 0.92 | 0.93 | 700 |
| Bronze | 0.65 | 0.69 | 0.67 | 700 |
| Ceramic | 0.79 | 0.60 | 0.68 | 700 |
| Clay | 0.66 | 0.80 | 0.73 | 313 |
| Engraving | 0.66 | 0.57 | 0.61 | 700 |
| Etching | 0.52 | 0.62 | 0.56 | 700 |
| Faience | 0.86 | 0.72 | 0.78 | 700 |
| Glass | 0.65 | 0.59 | 0.62 | 700 |
| Gold | 0.84 | 0.85 | 0.84 | 700 |
| Graphite | 0.60 | 0.91 | 0.72 | 188 |
| Hand-colored engravings | 0.89 | 0.96 | 0.92 | 328 |
| Hand-colored etching | 0.88 | 0.93 | 0.90 | 584 |
| Iron | 0.54 | 0.74 | 0.63 | 265 |
| Ivory | 0.60 | 0.57 | 0.58 | 572 |
| Limestone | 0.64 | 0.58 | 0.61 | 700 |
| Lithograph | 0.63 | 0.66 | 0.64 | 700 |
| Marble | 0.43 | 0.57 | 0.49 | 257 |
| Oil on canvas | 0.78 | 0.62 | 0.69 | 700 |
| Pen and brown ink | 0.63 | 0.72 | 0.67 | 286 |
| Polychromed wood | 0.48 | 0.60 | 0.53 | 375 |

| | | | | |
|-----------------------|------|------|-------|-------|
| Porcelain | 0.81 | 0.73 | 0.76 | 700 |
| Silk and metal thread | 0.20 | 0.68 | 0.31 | 95 |
| Silver | 0.72 | 0.70 | 0.71 | 700 |
| Steel | 0.48 | 0.85 | 0.62 | 133 |
| Wood | 0.72 | 0.57 | 0.63 | 700 |
| Wood engraving | 0.61 | 0.77 | 0.68 | 361 |
| Woodblock | 0.87 | 0.69 | 0.77 | 700 |
| Woodcut | 0.81 | 0.80 | 0.80 | 700 |
| Woven fabric | 0.66 | 0.57 | 0.61 | 700 |
| | | | | |
| accuracy | | | 0.694 | 15657 |
| macro avg | 0.67 | 0.71 | 0.679 | 15657 |
| weighted avg | 0.71 | 0.69 | 0.70 | 15657 |

7. ETHICAL CONSIDERATIONS

This CNN model has been developed solely for educational purposes and is intended to be used within the scope for which it was conceived. It is not intended to cause harm or damage to any individual or entity. The model is not to be used for any illegal, unethical, or malicious activities. Any use of this CNN model beyond its intended purpose is strictly prohibited. The developers of this CNN model do not assume any responsibility for any consequences that may arise from the misuse of the model. Users are solely responsible for ensuring that their use of the model complies with all applicable laws and regulations. The developers of this CNN model disclaim any liability for any damages or losses incurred as a result of using the model. Users should exercise caution and use the model responsibly, keeping in mind its intended educational purposes only.
