## Model card: Feature extraction

João Valério

Eirik Grytøyr

Date: 11/05/2023

## 1. MODEL DETAILS

### a. Person or Organization

The responsible individuals of the present project are:

- João Valério (joao.agostinho@estudiantat.upc.edu)
- Eirik Grytøyr (grytoyr.grytoyr@estudiantat.upc.edu)

From the FIB - UPC Universitat Politècnica de Catalunya organization.

### b. Date

11.05.2023

### c. Version

1.0

### d. Type

Support vector machine with features from CNN.

## 2. INTENDED USE

The primary purpose of this model is for educational use within the context of a deep learning assignment in the Master in Artificial Intelligence program at UPC. The model was designed to demonstrate the understanding and possibilities for feature extraction from pretrained models in the field of transfer learning related to image classification.

This model can serve as a baseline for comparing the performance of different algorithms or more complex models on the same problem, assisting in identifying areas for improvement and potential routes for further research.

Please note that this model is not intended for deployment in real-world applications or for use in critical applications. The model's performance and generalizability have not been rigorously tested, and it may not be suitable for use outside of the educational context.

## 3. METRICS

During development, the primary metric used was validation accuracy, accompanied by the true positive distribution from the confusion matrix. For the final evaluation of the model, metrics such as accuracy, precision, recall, and F1-score were used and are presented in Chapter 6.

## 4. THE DATA

The training data used is the low-resolution images from the Museum Art Medium dataset ([https://storage.hpai.bsc.es/mame-dataset/MAMe\\_data\\_256.zip](https://storage.hpai.bsc.es/mame-dataset/MAMe_data_256.zip)), which contains 29 classes of materials and techniques. Each class has an equal distribution of 700 examples in the dataset and 150 examples in the validation set.

The test data used follow the distribution in Table 1:

Table 1: Label distribution in the test set.

Label	Distribution	Label	Distribution
Albumen photograph	700	Lithograph	700
Bronze	700	Marble	257
Ceramic	700	Oil on canvas	700
Clay	313	Pen and brown ink	286
Engraving	700	Polychromed wood	375
Etching	700	Porcelain	700
Faience	700	Silk and metal thread	95
Glass	700	Silver	700
Gold	700	Steel	133
Graphite	188	Wood	700
Hand-colored engraving	328	Wood engraving	361
Hand-colored etching	584	Woodblock	700
Iron	265	Woodcut	700
Ivory	572	Woven fabric	700
Limestone	700	-	-

The distribution indicates that the generalizability for labels with low representation such as Faience and Graphite has low confidence.

### a. Preprocessing

As the model is using an efficientNet backbone, no preprocessing is necessary.

### b. Limitations

Upon inspecting the dataset, it is observed that objects are centred in the images, unrotated, and presented with good lighting conditions. Consequently, any new, unseen data should adhere to the same conditions for optimal performance. The developers have not conducted an analysis to determine whether the objects accurately represent the art labels, in form of style or techniques. The model supports input images of resolution 256x256.

The tests are performed on predefined validation and test sets. Those might have different characteristics than the training set. Additionally, it is not performed K-fold cross-validation or statistical analysis of the results, so it might be affected by the initialization.

Since the model is based on the pretrained EfficientNetV2B2, biases and limitations in the model and from the imagenet dataset will impact this model as well. Probably use on images that are similar to the ones contained in imagenet will have a higher activation and better performance.

## 5. MODEL ARCHITECTURE

The model consists of a feature extraction part that are obtaining the layer activations from the following layers in the EfficientNetV2B2:

block4d\_project\_conv,  
block4d\_se\_expand,  
block5a\_se\_expand,  
block5b\_project\_conv,  
block5c\_expand\_conv,  
block5c\_se\_reduce,  
block5d\_expand\_conv,  
block5d\_se\_expand,  
block5e\_expand\_conv  
block5e\_se\_reduce,  
block6a\_expand\_conv,  
block6b\_project\_conv,  
block6c\_expand\_conv,  
block6c\_se\_expand,  
block6d\_project\_conv,  
block6f\_project\_conv,  
block6g\_project\_conv,  
block6g\_se\_reduce,  
block6h\_project\_conv,  
block6i\_project\_conv,  
top\_conv,

Those are converted to features, which are trained on a Support vector machine with linear kernel and Regularization parameter  $C = 0.7$ .

The full model summary of the EfficientNetV2B2 can be found in the appendix.

## 6. PERFORMANCE

Table 2 shows the results after applying the model to the test data set.

The overall accuracy is 85%, while the macro F1 score is 84%.

*Table 2: Test results*

Label	Precision	Recall	F1-Score	Support
Albumen photograph	0.983	0.983	0.983	700
Bronze	0.811	0.851	0.831	700
Ceramic	0.852	0.859	0.856	700
Clay	0.849	0.882	0.865	313
Engraving	0.789	0.826	0.807	700
Etching	0.797	0.759	0.777	700
Faience	0.906	0.859	0.882	700
Glass	0.878	0.844	0.861	700
Gold	0.901	0.937	0.919	700
Graphite	0.832	0.947	0.886	188
Hand-colored engravings	0.976	0.994	0.985	328
Hand-colored etching	0.968	0.973	0.97	584
Iron	0.756	0.853	0.801	265
Ivory	0.824	0.808	0.816	572
Limestone	0.848	0.764	0.804	700
Lithograph	0.889	0.844	0.866	700
Marble	0.625	0.844	0.719	257
Oil on canvas	0.835	0.81	0.822	700
Pen and brown ink	0.865	0.916	0.89	286
Polychromed wood	0.603	0.664	0.632	375
Porcelain	0.919	0.936	0.927	700
Silk and metal thread	0.33	0.758	0.46	95
Silver	0.901	0.821	0.859	700

Steel	0.856	0.94	0.896	133
Wood	0.845	0.803	0.823	700
Wood engraving	0.82	0.881	0.849	361
Woodblock	0.961	0.939	0.949	700
Woodcut	0.92	0.891	0.906	700
Woven fabric	0.938	0.759	0.839	700
accuracy			0.857	15657
macro avg	0.837	0.86	0.844	15657
weighted avg	0.864	0.857	0.859	15657

## 7. ETHICAL CONSIDERATIONS

This CNN model has been developed solely for educational purposes and is intended to be used within the scope for which it was conceived. It is not intended to cause harm or damage to any individual or entity. The model is not to be used for any illegal, unethical, or malicious activities. Any use of this FE model beyond its intended purpose is strictly prohibited. The developers of this FE model do not assume any responsibility for any consequences that may arise from the misuse of the model. Users are solely responsible for ensuring that their use of the model complies with all applicable laws and regulations. The developers of this FE model disclaim any liability for any damages or losses incurred as a result of using the model. Users should exercise caution and use the model responsibly, keeping in mind its intended educational purposes only.

## Appendix - Model summary

Model: "model"

Layer (type)	Output Shape	Param #	Connected to
